OBJECTIVE

3rd-year Software Engineering student at Istanbul Nişantaşı University, specializing in .NET backend development. Experienced in building clean, maintainable, and efficient applications. Passionate about solving complex problems, writing high-quality code, and continuously improving technical skills. Seeking an internship or part-time opportunity to contribute to real-world projects, gain industry experience, and grow as a backend developer.

SKILLS

C++, Data Structures (DS), Object-Oriented Programming (OOP), C#, .NET Core, WinForms, Windows Services, RESTful APIs, ADO.NET, Entity Framework Core, T-SQL, PostgreSQL, SignalR, JWT Authentication, Clean Code, N-Tier Architecture, SOLID Principles, Render, Git, GitHub

EDUCATION

Nisantasi University, Istanbul Türkiye

Software Engineering (3rd Year)

October 2023 – July 2027

Completed courses in Data Structures, Algorithms, Databases, Web Development, Software Design, and OOP. Served as Leader of the Nişantaşı Blockchain Club, organized events to promote blockchain and tech literacy, and volunteered as a Web Developer at ESN Nişantaşı Club, building and maintaining the club's web application.

PROJECTS

Smart Library Management System API [\(View Code\)](#)

The Smart Library Management System is a backend API built with ASP.NET Core and Entity Framework Core for managing books, users, and borrowing operations. It simulates a real-world library workflow, including borrow/return rules, late fees, soft deletes, and JWT authentication.

E-Commerce Backend API [\(View Code\)](#)

The E-Commerce Backend API is a backend system built with ASP.NET Core Web API and Entity Framework Core. It manages products, categories, carts, orders, and discounts, simulating real-world e-commerce workflows.

Hotel Booking & management System [\(View Code\)](#)

It is a backend API project built with ASP.NET Core web API and Entity Framework Core. It manages rooms, room types, bookings, and pricing, including date conflict validation and invoice generation.

Chat App backend API [\(View Code\)](#)

Real-time chat backend built with .NET, supporting messaging and group creation through scalable REST APIs.

Fullstack-Winforms BankSystem [\(View Code\)](#)

Layered desktop banking system built with WinForms, ADO.NET, and .NET Core, supporting account and transaction management.
